

B2B Client Database – Digital Marketing Agencies Across India & Global Markets.

Lead Generation & Market Research Project

Objective:

The objective of this project was to build a well-organized B2B client database of digital marketing agencies from India and international markets. The database was created to support business development, client acquisition, partnership outreach, and lead generation campaigns by collecting verified company information and key contact details. The final database was organized in a CRM-ready format for outreach and business development.

Project Overview:

This project involved researching digital marketing agencies across multiple countries and compiling their business information into a structured spreadsheet. The database was designed to help sales and marketing teams quickly identify potential clients and streamline outreach efforts.

The research covered agencies from India, USA, UK, Canada, Australia, China, Japan, South Korea, and Singapore.

LinkedIn company profile used for verifying business details.

Tools Used:

- Google Search
- LinkedIn
- Company Websites
- Microsoft Excel
- Google Sheets
- Google Maps (Company Verification)
- AI Assistance (Content Structuring)

Skills Demonstrated:

- B2B Lead Generation
- Web Research
- Company Research
- Contact Research
- LinkedIn Research
- Data Collection
- Prospect List Building
- Data Verification
- Excel Data Management
- CRM-Ready Database Preparation

Deliverables:

- Structured B2B client database
- Verified company information
- Business contact details
- Organized prospect list
- Outreach-ready spreadsheet
- Google Sheets Version

Outcome:

Successfully created a clean and organized database of 15 digital marketing agencies across 9 countries, making it suitable for client outreach, partnership opportunities, sales prospecting, and business development activities. The database can be directly used for cold email campaigns, LinkedIn outreach, partnership research, and sales prospecting.

Implementation in Google Sheets:

Caption:

The collected database was organized and maintained in Google Sheets for easy data management, verification, and future business use.

Final structured database prepared in Google Sheets for data management.

Conclusion:

This project successfully demonstrated data entry, spreadsheet management, and database organization skills. The information was accurately entered into Google Sheets in a structured format, making the database suitable for future business and research purposes.

Healthcare Research Database – International Nursing Journals & Editorial Contacts

Objective:

The objective of this project was to create a structured healthcare research database of internationally recognized nursing journals and their editorial information. The database was designed to support professors, researchers, healthcare professionals, and academic institutions by providing organized journal details for manuscript submission, publication research, and academic collaboration.

Project Overview:

This project involved researching internationally recognized nursing journals and collecting publicly available editorial and publication-related information from official journal websites.

The database was organized to help researchers quickly identify suitable journals based on their scope, publisher, and editorial information, making the publication process more efficient.

The research covered journals published by leading international publishers and academic organizations.

Methodology:

- Identified internationally recognized nursing journals through Google Search and official publisher websites.
- Verified journal information using official journal webpages and publisher platforms.

- Collected key publication details, editorial information, and journal scope.
- Organized the collected data into a structured database for easy reference.
- Reviewed and verified the information to ensure accuracy and consistency.
